

DHARMA TEJA PUTTA

Software Engineer | Backend Development • REST APIs • Full-Stack Systems

Hyderabad, India • +91 73869 46016 • puttadharma6@gmail.com • linkedin.com/in/dharma-tejaa • github.com/dharma-byte

Professional Summary

Software Engineer with hands-on experience in building scalable backend systems, RESTful APIs, and full-stack applications using Java, Python, and modern web technologies. Proficient in Spring Boot, Kafka, FastAPI, and SQL databases, with a strong foundation in microservices architecture, data processing, and secure API design. Experienced in developing real-time and analytics-driven applications, optimizing performance, and delivering reliable, production-ready solutions in collaborative environments.

Technical Skills

Languages: Python, JavaScript, C++, Java, SQL, Bash/Shell Scripting.

Backend & APIs: FastAPI, Node.js, RESTful APIs, WebSockets, Role-Based Access Control, Input Validation, Microservices.

Frontend: Next.js, React, HTML5, CSS3.

Databases: PostgreSQL, MySQL, SQLite, Firebase Firestore, SQLAlchemy ORM, Prisma, Query Optimization.

DevOps & Cloud: Docker, Git, GitHub, Linux, CI/CD Pipelines, Uvicorn, Firebase, Postman, VS Code.

Work Experience

Software Engineer Intern

Oct 2025 – Present

Nexzap Software Development.

- Built real-time messaging features using Socket.IO, enabling low-latency bidirectional communication for 100+ concurrent users within a responsive web application.
- Implemented secure user authentication and real-time data synchronization using Firebase Authentication and Firestore, reducing unauthorized access incidents to zero across testing cycles.
- Designed and integrated 8+ RESTful API endpoints in a structured Git/GitHub collaborative environment with branching strategies and pull request reviews.

Software Engineer Intern

Aug 2025 – Oct 2025

Yuga Yatra Retail (OPC) Pvt. Ltd.

- Contributed to production-level backend API integrations across 10+ endpoints, implementing structured workflows that improved code quality and system maintainability.
- Collaborated with senior engineers to debug, optimize, and refactor existing modules using version control, code reviews, and systematic testing, reducing bug recurrence by ~30%.
- Gained hands-on exposure to CI/CD deployment pipelines and Linux-based production environments, improving release reliability and application uptime.

Projects

JPMorgan Chase Software Engineering Simulation

github.com/dharma-byte/jpmc-midas-kafka-system

2026

- Integrated Kafka into a Spring Boot microservice to consume and deserialize high-volume transaction messages using a configurable topic and embedded Kafka test framework, implementing transaction validation and persistence logic with Spring Data JPA and an H2 SQL database including entity modeling and balance updates across relational User records.
- Connected the service to an external REST Incentive API using RestTemplate to process incentive responses within transactional workflows, and developed a REST endpoint for querying user balances returning JSON responses through a Spring controller while maintaining clean architectural boundaries.
- **Tech Stack:** Java, Spring Boot, Kafka, REST APIs, JPA, H2, Maven.

Finance Tracking System — Backend REST API

github.com/dharma-byte/Finance_System

2025

- Designed and developed a Python-based backend using FastAPI and SQLAlchemy to support full CRUD operations for financial transactions with advanced filtering, handling 15+ API endpoints with robust error handling and scalable architecture.
- Implemented secure role-based access control (Viewer, Analyst, Admin) using JWT authentication, password hashing, and Pydantic validation, while building analytics endpoints for income/expense tracking, category insights, and real-time financial dashboard support.
- **Tech Stack:** Python, FastAPI, SQLAlchemy, SQLite, Uvicorn, Docker.

TaskFlow — Scalable REST API with JWT Auth & RBAC

github.com/dharma-byte/taskflow

2026

- Built a production-ready REST API using Node.js and Express with JWT authentication, refresh token rotation, and role-based access control (user/admin), designing a normalized PostgreSQL schema with indexed queries, connection pooling, and auto-migration for efficient paginated and filtered data retrieval across secure CRUD endpoints for task management.
- Implemented security best practices including bcrypt password hashing (salt rounds=12), rate limiting, Helmet HTTP headers, and input sanitization via express-validator, while delivering a full-stack React.js frontend with JWT interceptors, auto-refresh, protected routes, and a real-time CRUD dashboard fully documented via Swagger/OpenAPI and containerized with Docker.
- **Tech Stack:** Node.js, Express, PostgreSQL, JWT, React.js, Docker, Swagger, Helmet, bcrypt.

Education

B.Tech — Electronics & Communication Engineering

Sreenidhi Institute of Science and Technology, Hyderabad.

2021 – 2025

CGPA: 7.6 / 10

Certifications

- **JPMorgan Chase Software Engineering Virtual Experience** — Kafka-based transaction processing, Spring Boot microservices, REST API integration, JPA persistence, and financial systems simulation.
- **Web Full Stack Developer Virtual Internship** — **AICTE & EduSkills Academy** — Full-stack web development, frontend and backend integration, responsive design, and modern web frameworks.
- **AI/ML Virtual Internship** — **Google Developers** — ML workflows, model evaluation, supervised/unsupervised learning, AI problem-solving.
- **Python Using AI** — **AI For Techies** — Python automation, data structures, AI-based mini projects, data handling and scripting.
